Subject: Project 19-20E Enough with corporate subsidies!

I am tired of working 40+ hours a week and paying my fair share of taxes when corporations making millions of dollars pay minimal taxes, if any at all! It is greed at its worst and subsidizing the wealthy under the assumption that it helps stimulate the economy is just plain wrong and grossly unfair.

The best estimate is that corporate welfare costs state and local governments [more than \\$70 billion per year](#). That works out to \$900 annually for a family of four, which is more than a week's take-home pay for the typical family. That's outrageous!

If Project 19-20E can at least shed some light on just how much corporations are shirking paying their fair share of taxes, at least it's a start!
